Leadership, Vision & Personality - Academic

What is needed ~ (1) **Teaching** is the mainstay of academia, and in order to be sustained, teaching needs firm embedding in research and needs academic leadership at different levels to keep focus and purpose.

Students need to be challenged to bring out the best in themselves. They have a sense of what they need, but an academic education is not (merely) intent on providing skills for students' first job and should be focused on knowledge (and skills) for a lifetime. In a life-long learning and technology-imbued world, bachelor and master programmes, more perhaps than before, need to offer and stimulate critical and independent thinking. For universities this means that they need to offer programmes that have value and recognition for many years to come.

(2) **Research** in academia must aim to push the boundaries of global knowledge as well as add value to society broadly conceived. These two are closer together than many sometimes think: there is not much more practical than a good theory. Research contributes at its best if done in collaboration with others. These others can be found anywhere in the world, but without a strong 'home base' either colleagues become footloose or their inspiration dries out. At the home base this means that an appropriate balance of new inflow, sometimes temporary in the shape of (research) master, PhD students and visitors, on the one hand, and internationally recognized core academics on the other hand needs to be found. An academic 'home base' of a Higher Education Institute can be extended as its one-time members move elsewhere – it is important to maintain the (personal) bonds forged for possible future collaboration.

In order for Teaching and Research to link up successfully, and for students and staff to thrive, (3) **Academic Leadership** needs to create the appropriate circumstances. Academics – staff and students - are highly intelligent humans. They are willing to be led, but need a clear view of where to develop towards, and why. They also need to have the sense that they are heart, that the organisation then moves there, and that subsequently **Administration** does not get in the way too much. Administration needs to develop, explain and universally implement a set of policies that mostly is seen as fair. Clear and fair policies that are pre-conceived to stand the test of time and critical reflection are needed.

What I bring ~ In my career so far, I **personally** have straddled the academic areas of (development / institutional) economics, philosophy, art & culture studies, history, sociology, anthropology, geography, science studies, legal studies. As Academic Leader, I have set up and run departments and research units that combined different disciplines. At the University of *Groningen*, for instance, I have successfully merged departments of strategy, business development and information systems (ca. 40fte), to subsequently involve scholars in an overarching research institute to also include accounting and management accounting. At *Loughborough* University (LU) in London, I set up an institute on innovation & entrepreneurship, building it from 0 to 20fte staff in 3 years as LU set up a new school in London. The institute delivered 5 MSc programmes that were rated by students at the same level as the LU midlands campus average (#1 in UK). I was the Associate Dean for Teaching at LU London as well, responsible for the full portfolio of 28 MSc programmes' consistency and quality. This involved intense aligning inside the London school as well as with each institute's Midlands sister school. As the London school was paper-less / online, the policies for it had to be set-up anew. This involved working very closely inside my (second) team of 'professional services' (ca. 20fte). In London, I helped set up a 7th institute and reshaped one of the original 6 ones as it faced a possible international uproar. After Brexit and Windrush, now in *Wageningen*, I have reshaped and rejuvenated the Business Management & Organisation (BMO) chairgroup (ca. 50fte). Having full P&L responsibility for the BMO chairgroup, I have quickly branched out to be involved as director of the AEGP programme and as 'trekker' on WUR's strategic theme of entrepreneurship. As 80% of WUR students are to be reached, the impact is to be a broad one.

Before taking academic leadership roles, I have been on boards of a number of local cultural and international academic organisations. As these mostly rely on intrinsically motivated volunteers, leadership there is relevant for academia as well. When treasurer on the board of *Hal4*, joint with for instance a former harbour alderman and ministry director-general, this organisation needed substantial strategic re-direction. When treasurer on the board of *Metropolis*, the organisation faced dire financial times. Treasurer on the board of *Cultuurnetwork.nl* was in a more stable setting. Each of these organisations had budgets of several mio € and several dozens of employees (co-workers). I have also been on executive boards of international academic associations in charge of running conferences, journals, prizes, recruitment, including for EAEPE, ASE, AFEE and FEED.

What I believe is needed by a Higher Education Institute of academic leader, as described above, is what I believe I bring.
